

# PRP(platelet-rich plasma) application for hard tissue regeneration of applying on facies recovery case

**DR.HJIME OKUDERA DR.TAISUKE WATANABE**

Still, the study of the IPS cells and stem cell proliferation has been actively Hard tissue regeneration, but clinical application is that the former still.

However, there is a track record to go for many years was to aim to stem cells, tissue regeneration by GROWTH FACTAR. I both have been announced the effect of PRP platelet-rich plasma for hard tissue and is involved in particular the blood clinical application regenerative therapy.
